

Agentic AI- based Autonomous Operations

POWERED BY NVIDIA AI PLATFORM |
PRODAPT PROJECT

Project Overview

Project Name:
Agentic AI-based
Autonomous
Operations

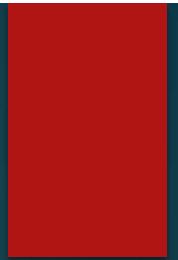

Client/Partner:
Collaboration with
NVIDIA

What is the Project?

- ▶ - Prodapt and NVIDIA worked together to create AI-powered Agents for telecom companies.
- ▶ - These AI Agents predict, analyze, and fix network issues before they impact customers.
- ▶ - The goal is to move telcos from reactive operations (fixing problems after they happen) to proactive operations (preventing problems early).

Solution Provided by Prodapt

Deployed AI Agents trained for telecom operations using NVIDIA NIM and NeMo microservices.

Inserted these agents across network workflows to:

- Predict issues with analytics

- Send proactive alerts

- Dispatch the right engineer at the right time

- Create summaries and guided resolution plans

- Close the loop after resolution

Before the Solution

After the Solution

Up to 30% improvement in resolution cycle time.

Better resource utilization by sending the right engineer at the right time.

Shifted operations from reactive to proactive.

Improved customer experience with fewer delays and disruptions.

Future-proofed telecom operations with AI-driven automation.
